

## Hobbit Trap: How New Species are Invented

By Maciej Henneberg, Robert B. Eckhardt, John Schofield

Left Coast Press Inc, United States, 2010. Paperback. Book Condition: New. 2nd Revised edition. 226 x 152 mm. Language: English . Brand New Book. When scientists found the remains of a tiny hominid on an Indonesian in 2004, they claimed they found a totally new species of human ancestor (homo floresiensis), and called it a Hobbit. Film crews rolled in and the little creature took the world by storm, but a group of prominent scientists, including Maciej Henneberg and Robert Eckhardt, smelled a rat. They refuted the data-the size and shape of bones, the inferences about height-and they raised fundamental questions about scientific method, revealing cultural and political pressures that lead to the wide acceptance of unsupported theories. The Hobbit Trap describes how the case against the new species theory developed and offers an important critique of the species concept in evolution. In this thoroughly updated second edition, the authors include new data and analysis of the Flores fossils, and expand their important analysis of scientific practice, calling for a new movement to reverse the decline in scientific standards and the rise in scientific politics. This lively and important challenge to conventional wisdom is accessible to the general reader and...
