

Journal of Morphology, 1891, Vol. 5 (Classic Reprint)

By Wistar Institute of Anatomy and Biology

Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from Journal of Morphology, 1891, Vol. 5 This shape of the ali-sphenoids does not occur in the recent species, as in correlation with the heightening of the molar crowns the glenoid cavity is placed at a higher level, so that this portion of the ali-sphenoids has become almost vertical. The orbito-sphenoids seem to have about the shape and proportions seen in the llama. The tympanics are inflated into enormous bullae, which in both species of Pcebrotherium are relatively much larger than in the recent genera, and are more rounded. In the small species, P. Wilsoni, they are larger and less compressed than in P. labi-atum, and in both the long diameter is directed nearly parallel to the cranial axis, while in the modern forms it is placed at a wide angle with it. The postero-external angle of the bulla shows a deep styloid groove, a vertical gutter ending below in a pit with a process for the conjunction of the styloid bone (Leidy, No. 19, p. 143). The pit is decidedly smaller and shallower than in...
