Such leaders tend to argue that developed countries should not only shoulder any near-term burden of reducing emissions but also compensate developing countries for climate-related damages. They also tend to be skeptical of arguments that favor balancing net economic costs and benefits, recognizing that such reasoning may be used to gloss over both distributional issues and disparities in impacts. In contrast, other policymakers in both developed and developing countries tend to be less concerned about climate-related issues because they believe that their nations are not particularly vulnerable to potential changes in climate or will be able to adapt to whatever changes may occur. Governments could control greenhouse gas emissions in a variety of ways. Under direct commandwznd-eontrolregu-lation, the government could specify the types of equipment and technology that...
